

Telehealth

Partners Addressing COVID-19

Telehealth remotely connects healthcare providers and patients for timely medical diagnosis and clinical decision-making support in lieu of in-person support. Telehealth can be used for videoconferencing to allow a physician /healthcare professional to lay eyes on a patient only, or in conjunction with diagnostic tools to thoroughly assess the condition of a patient.

Our Marketplace partners provide the following solutions:

- Videoconferencing software to connect nurses with remote physicians, displaying pertinent clinical details pulled from PointClickCare into a user interface for the physician
- Telehealth carts with specialized cameras & tools for advanced diagnostic analysis (vital monitors, stethoscope, EKG tests)
- Specialized, on-call physician services to assist with round-the-clock or after-hours/weekend coverage for emergency medicine and triage

CMS has implemented a temporary reimbursement model for Telehealth to encourage remote healthcare in light of COVID-19. From March 6 onwards, physician consults delivered remotely will be treated and reimbursed at the same rates as physicians delivering them in-person. Utilizing telehealth can reduce the risk of COVID-19 exposure and transmission among health professionals in high demand.
